ABOUT ZEROSCALE DM PLANTS

ZeroScale DM (Demineralization) Plants remove dissolved mineral salts — calcium, magnesium, sodium, chlorides, sulphates, and silica — from raw or pre-treated water using ion-exchange resin. Raw water is passed through strong acid cation (SAC) resin followed by strong base anion (SBA) resin, or through a mixed bed of both resins in a single vessel, producing near mineral-free demineralized water for boiler feed, laboratories, pharma, electronics, and industrial process applications. The DM series covers compact laboratory units, twin-bed industrial plants, and mixed-bed polishers to match every purity and flow requirement.

POWERED BY AQUA FILTRATION SYSTEM

Aqua Filtration System has been supplying water treatment equipment — RO plants, water softeners, DM plants, and dosing systems — from Faridabad, Haryana since 2017. Every ZeroScale unit is manufactured, installed, and serviced under the Aqua Filtration System quality and after-sales network.

WHY USE A DM PLANT?

- ✓ Removes dissolved minerals, salts & silica that RO and softeners cannot fully eliminate
- ✓ Delivers ultra-low TDS demineralized water for boiler feed, pharma & electronics
- ✓ Twin-bed and mixed-bed configurations for every purity requirement
- ✓ Corrosion-free FRP resin vessels rated for long-term industrial use
- ✓ Simple acid/caustic regeneration cycle restores full resin capacity
- ✓ Backed by Aqua Filtration System's installation and after-sales service network

CONTENTS

- 1. ZS-DM-20LPH** — Compact DM Plant for Laboratory & Small RO Polishing
- 2. ZS-DM-200LPH** — Twin-Bed Cation-Anion DM Plant for Industrial Process Water
- 3. ZS-DM-mix-200LPH** — Mixed Bed DM Plant (Polisher) for Ultra-Pure Water

MODEL ZS-DM-20LPH

Compact DM Plant for Laboratory & Small RO Polishing

 **WTPeSTORE**
Zero Scale Dm plant
model ZS-DM-20LPH

WTPeSTORE | Premium Water Solutions

Description

The ZeroScale ZS-DM-20LPH is a compact, skid-mounted demineralization plant housing pre-filtration and ion-exchange resin columns on a single stainless steel frame, paired with a water softener pre-treatment tank. It is built for laboratories, battery water preparation, electronics manufacturing, and small-scale RO polishing applications where a steady supply of low-TDS demineralized water is needed at a modest daily volume.

Configuration: Skid-mounted, 3 FRP columns + softener

Technical Specifications

Configuration	Skid-mounted unit — pre-filter, cation & anion resin columns with softener pre-treatment
Vessel Material	FRP columns (corrosion-free)
Resin Type	Strong Acid Cation (SAC) + Strong Base Anion (SBA) resin
Flow Rate	20 LPH
Output TDS	zero ppm (typical, depending on inlet water quality)
Control	Manual valve operation
Regeneration	Dilute HCl (cation) & Caustic Soda / NaOH (anion)
Inlet / Outlet Connection	15 NB (8 mm tube)
Max Working Pressure	4.2 kg/cm ²
Recommended Use	Laboratory, battery water, small RO polishing, electronics

MODEL ZS-DM-200LPH

Twin-Bed Cation-Anion DM Plant for Industrial Process Water

Description

The ZeroScale ZS-DM-200LPH is a twin-bed demineralization plant with two FRP resin vessels (Model AFS1054) — the first charged with strong acid cation resin, the second with strong base anion resin. An auto-cut TDS controller cum level sensor monitors output quality and tank levels, while dedicated caustic soda and HCl regeneration tanks keep the resin beds performing at full capacity. Built for boiler feed, textile, and general industrial process water requiring consistent low-TDS output at higher daily volumes.

Configuration: Twin-bed FRP vessels, Model AFS1054

Technical Specifications

Vessel Size	2 x FRP vessels, Model AFS1054 (corrosion-free)
Bed Configuration	Vessel 1: Strong Acid Cation (SAC) resin • Vessel 2: Strong Base Anion (SBA) resin
Flow Rate	200 LPH
Output TDS	< 10 ppm (typical, depending on inlet water quality)
Control	Auto-cut TDS controller cum level sensor with manual regeneration valves
Regeneration Chemicals	HCl (cation vessel) & Caustic Soda / NaOH (anion vessel) — dedicated dosing tanks included
Inlet / Outlet Connection	20 NB
Max Working Pressure	4.2 kg/cm ²
Recommended Use	Boiler feed, industrial process water, textile, general commercial/industrial use

MODEL ZS-DM-mix-200LPH

Mixed Bed DM Plant (Polisher) for Ultra-Pure Water

WTPeSTORE

**Zero Scale Dm plant
mix bed model no
ZS-DM-mix-200LPH**

WTPeSTORE | Premium Water Solutions

Description

The ZeroScale ZS-DM-mix-200LPH is a single-vessel mixed bed DM plant used as a final polishing stage after a two-bed DM plant. Cation and anion resins are intimately mixed within one FRP vessel, and a multi-valve manual piping assembly directs flow between service, backwash, and regeneration modes. This configuration delivers the lowest achievable TDS output, making it ideal for boiler feed polishing, pharmaceutical water, electronics manufacturing, and laboratories that require ultra-pure water.

Configuration: Single FRP mixed-bed vessel with manual multiport piping

Technical Specifications

Vessel Size	1 x FRP vessel (mixed cation + anion resin bed)
Resin Type	Intimately mixed Strong Acid Cation (SAC) + Strong Base Anion (SBA) resin
Flow Rate	200 LPH
Output TDS	< 1 ppm (ultra-pure, polishing grade)
Control	Manual multi-valve piping assembly (service / backwash / regeneration)
Regeneration	HCl & Caustic Soda / NaOH (external regeneration recommended)
Inlet / Outlet Connection	20 NB
Max Working Pressure	4.2 kg/cm ²
Recommended Use	Boiler feed polishing, pharma, electronics, laboratory ultra-pure water
