ABOUT ZEROSCALE RO PLANTS

Zero Scale RO Plants (R Series) are reverse osmosis systems that remove dissolved salts, heavy metals, hardness, and other total dissolved solids (TDS) from raw water using semi-permeable TFC membranes under high pressure. The R series covers seven capacities — from 200 LPH for homes and small shops to 5000 LPH for bulk industrial and bottling applications — so every daily volume requirement is matched to the right plant.

POWERED BY AQUA FILTRATION SYSTEM

Aqua Filtration System has been supplying water treatment equipment — RO plants, water softeners, DM plants, and dosing systems — from Faridabad, Haryana since 2017. Every ZeroScale unit is manufactured, installed, and serviced under the Aqua Filtration System quality and after-sales network.

WHY CHOOSE A ZEROSCALE RO PLANT?
